DEVELOPMENT

WELCOME TO THE FUTURE OF EPOS

evoPOS is a next-generation EPOS system purpose-built so convenience and fuel retailers can take advantage of modern technologies that enhance the customer experience and help drive margins.

Powered by open technology that encourages interoperability rather than closed proprietary standards, evoPOS is a truly connected POS. It is the ideal foundation for any convenience and fuel retail environment.

BENEFITS

Low-risk upgrade – compatibility means that upgrade can occur anytime and at a pace of the retailer's choosing.

Connected POS – open connectivity with other apps and services and highly flexible architecture properly enables the POS to become the hub of the c-store or forecourt.

Access to new functionality faster – rapid software release cycles ensure that new functionality is released and deployed in a fraction of the time versus traditional EPOS systems, so retailers have access to new features quickly and can remain competitive.

Reduce training costs and learning time – easy-to-use interface saves time and money ensuring staff can operate EPOS systems.

Self-checkout – self-checkout capability is built into evoPOS so you can cost effectively deploy our Hybrid or Dedicated evoSelfCheckout options, allowing your customers to self-serve.

Backward compatibility with Oracle Prism2 – important peace of mind that any new systems will work with legacy Oracle back office.

NEXT-GENERATION EPOS SYSTEM

What is evoPOS?

evoPOS is a next-generation EPOS system purpose-built for convenience and fuel retailers. evoPOS turns EPOS from a simple system that calculates baskets and takes payment to a truly connected hub at the heart of the c-store or forecourt. Unlike legacy EPOS solutions, evoPOS is built on modern, open standards so new software functions can be released faster than ever.

For the first time convenience and fuel retailers can confidently build systems that seamlessly work together, keep up with the latest retail trends, and offer unrivalled flexibility and choice thanks to the ability to connect best-of-breed third-party services for everything from loyalty to home delivery.

How is evoPOS used?

Gradually phase out legacy Oracle systems – stage migration with the confidence that evoPOS can work alongside original systems or simply deploy to offer new functionality like tablet POS.

Long-term systems strategy – with these solutions no longer being developed, retailers need to choose a long-term alternative for core EPOS systems.

Offer flexible value-adding services — from mobile payment to self-checkout, these value-added services are active in a fraction of the time compared to integration with legacy systems.

Enable attractive third-party services – seamlessly integrate best-of-breed solutions for services like loyalty without cost-prohibitive integration costs.

A stepping stone into the world of cloud services – choose to deploy the solution in the cloud for added security and scalability.

« evoPOS has integrated to all the apps and services I wanted - including home delivery, ESELS, NearSt, fuel monitoring software and innovative cash processing. This has meant I have been able to increase my revenue streams, efficiency and deliver the latest trends in customer service. »

Danyal Shoaib,
owner of Hylands Service Station

KEY FEATURES

Simple to use interface – highly intuitive interface with modern, consistent screens

Faster service – customers are served faster, supporting sales and ensuring the best in-store experience.

Best deal promotion engine – ensures the customer always gets the best deal whilst avoiding double discounting and unnecessary losses for the retailer.

Dedicated Apps – are available including home delivery, self-scan, wastage, loyalty and more. All of which further enhance the retail environment.

Hardware agnostic* – run on any combination of hardware without the need to upgrade this part of the EPOS solution.

Mobile straight out-of-the-box – both customers and retailers can enjoy a value-added experience as the result of software built for a mobile-first retail environment.

Real-time reporting – gain valuable reporting and analysis capabilities to better inform decision-making.

Open APIs – freely available to any third-party application or service the retailer may wish to connect with their EPOS solution.

Comprehensive product roadmap – new product features and functionality are planned well into the future so retailers can be assured that they keep up with retail trends.

** Subject to minimum system requirements.*

Intelligent retail for convenience and fuel
